TAKSHASHILA

INCUBATOR OF INTELLECTUAL CONSCIOUSNESS

A melting pot of cultures, the university of

Takshashila attracted scholarly minds from the Indian kingdoms as well as Babylon, China, Greece and Syria. Apart from the Vedas, 18 Sippas (Arts) including technical subjects such as medicine, law and military sciences were taught. Amongst notable alumni, Chanakya composed Arthashastra, the famous manual on governance, strategy and policy, at Takshashila. Jivaka, another alumnus, is recorded to have cured Emperor Bimbisara of fistula and King Pradyota of Ujjayini of jaundice. Another renowned professor was physician Charaka, who wrote one of the world's earliest treatises on medicine called Charakasamhita. Grammarian Panini, author of the famous Ashtadhyayi not only codified the complex rules of Sanskrit grammar but showed how languages could be approached in a scientific and structured manner. Patanjali, another grammarian par excellence and the compiler of Yoga Sutras, was also an alumnus of Takshashila. The rediscovery of Sanskrit grammar by the th Europeans in the 19 century revolutionised the study of languages.

SHARADA PEETH WHERE SCHOLARS SOURCED THEIR REFERENCE BOOKS

On the banks of the Kishanganga River stood the Sharada Peeth in Kashmir, which,

n ancient times was known as Sharada Desh or the land of Sharada, the Divine Feminine associated with learning (also known as Sarasvati). Thousands of devotees visited the temple, but scholars were additionally interested in referring to the ancient texts that were preserved carefully in the libraries. Ramanujacharya, the exponent of the Vishishtadvaita school of philosophy travelled all the way from Tamil Nadu to Kashmir in the 11th century in order to refer to the only available manuscript of commentary on the Brahmasutras so that he could write his own commentary. Yet another scholar Hemachandra, when commissioned to write a new grammar book by the king of Gujarat requested for a

copy of all the earlier grammar books which

were only available in their complete form

NALANDA THE UNIVERSITY WITH THE **TOUGHEST ENTRANCE EXAM** IN THE ANCIENT WORLD * Imagine an entrance examination for an

ancient university so difficult that only 20% of students who applied got selected. In order to secure admission into Nalanda, students often enrolled in coaching schools in the villages surrounding the uni versity. Students flocked from near and far to learn from the acclaimed teachers and in its prime, there were 8,500 students and 1,500 teachers. According to Yijing, a Chinese student, there were 100 lectures held in a day and students did not want to miss ever a minute of them. Under the tutelages of Nagarjuna, Vasubandhu, Asanga and Dharmapala, the intellectual tournaments in Nalanda nourished the culture of open debate in India. In addition to endowments from emperors, the revenues of 100 villages were allocated for the expenses of Nalanda which included food, accommodation, clothing and healthcare of the pupils. The majestic library of Nalanda was housed in three buildings, of which Ratnasagara was nine-storeyed tall and stored some of

VARANASI **WENT TO PROVE THEIR** CREDENTIALS

One of the oldest continuously inhabited cities of the world. Kashi or Varanasi. became the hub where scholars went to prove their scholastic credentials. Even when Takshashila was the reigning university, many students went to Kashi to study special courses in different schools of philosophies. It was the dream of scholars from every corner of India to travel to Kashi and engage in debates with learned Gurus on Vedic philosophy. Debates held at Kashi were often held in full public view and judged by a panel of acclaimed scholars. Important works of literature were composed on the banks of the Ganga, which are read to this day. The 17 century traveller Bernier stated that 'the whole city is a university'. He observed that the houses of teachers, where the students gathered, were like centres of education. Logicians, astronomers and Ayurveda acharayas were among the various subject-matter experts who made Kashi their home.

on the zero meridian attracted the finest mathematical astronomers who made use of the well-equipped observatory in the institute. Some of the most celebrated mathematicians of India taught at Ujjain, such as Varahamihira (6th century), Brahmagupta (7th century) and Bhaskaracharya (12th century). Varahamihira was a noted polymath, whose treatises on mathematical astronomy and encyclopedic text of Brihatsamhita have contributed immensely to Indian knowledge systems. Brahmagupta was the first to treat zero as a number in its own right, rather than

simply as a placeholder digit. His works such as Brahmasphuta Siddhanta and Khandakhadyaka, reached the Khalifa's court in Baghdad and revolutionized mathematics and astronomy in the Arab world and eventually Europe. The biggest jewel that emerged from Ujjain is Bhaskaracharya, who is credited for his work in differential calculus,

VALLABHI (APPROX. 7TH CENTURY CE - 12TH CENTURY CE) A UNIVERSITY WHERE STUDENTS FLOCKED TO STUDY ADMINISTRATION AND GOVERNANCE

Vallabhi, a capital of the Maitraka dynasty was situated at the seashore and was an important port for international trade. There is a collection of stories from the 11th century called Kathasaritsagara, in which a father is determined to send his son to study at Vallabhi in distant Gujarat rather than Nalanda or Varanasi, which were nearer to the Ganga plains where he lived. Vallabhi University was in fact established by professors from Nalanda in the 6th century CE. When Xuanzang visited the university in the 7 century, there were 6,000 students studying at the university. Its courses in Neeti (Public Administration/ Political Sciences) and Vaarta (Business/ Economics/Accountancy) provided training in holding important public administration positions. Graduates would present
